

Delivering world-class training and skills

Designed by the sector for the sector

- The Energy Skills Centre has been created thanks to over £11.4m of investment, funded by the New Anglia Local Enterprise Partnership's Local Growth Fund and East Coast College.

- A world-class, state-of-the-art commercial skills centre, designed around the needs of the energy, engineering, maritime, and offshore sectors, with evolution into broader sectors.
- The centre curriculum evolves with need and is constantly exploring new training such as hybrid car charging and decarbonisation upskilling.
- The college is no ordinary college as it maximises funding and opportunity outside the traditional funding streams. We can showcase lessons learnt as well as offer opportunities to share practice as well as train international skills

The journey

- Formation of partnerships with sectors and education to drive change, support need and ensure we meet the stretching targets of Net Zero
- Collaborate within the sector on existing skills and how we can retrain and upskill others to meet skills gaps in the region
- Educate the hearts and minds, not just skills
- Through the Energy and Maritime training landscape the college has fostered new ways of working to meet the skills shortages

Supports local to international skills needs

- The centre welcomes existing and new customers who want to upskill and develop their staff's technical and management competencies and qualifications.
- The innovation centre part of this building will work in partnership with employers to deliver tailored and bespoke courses to enable them to stay ahead of the curve.
- Training aims to meet current and future needs

Maritime training- international offer

East Coast College is a leading UK maritime college with an impressive portfolio of facilities and courses to meet the needs of the global shipping industry. Ships captains, officers and crew come to East Coast College for specialist training to ensure their skills and knowledge are maintained to the highest level.
